V 1.0 Ad4

Engineering Station] recent explosion of station
what's wrong - main computer ("access computer"), hatch D, ladder U to balcony over Reactor 1.
"receive communications" to answer call.

- ↳ Chief Eng Neeson says:
- 1) Reactor 1 is leaking rad; all will die in 1/2 hr if not fixed
 - 2) You are only one who can fix it.
 - 3) Virus in computer re: reactor, so it's not an accident
- ↳ 1) Try to raise the Reactor Shields (that will limit the leak to a confined space), but virus may interfere.
2) Try to stop reactor by venting cobalt coolant into the den; virus may stop that too.
3) Last option is to jettison the reactor, but that would be best as a last resort.

§ 1: How shield? 2: Will try ~~re~~ coolant 3: Will jettison. 4: Will see what I can do. §

1 → Should be an option in computer, access the computer to see it.

}} Confusion = "1" didn't do the computer ~~to~~ ^{option}, but the Neeson option. §

Errors found in 69105 terabyte sectors (when trying to raise shields)

U → [Balony] (pipes + W to ~~by~~ another Eng station)

W → [Balony Engineering Station] access computer. 1. (Success!)

~~if fail~~ if fail: e.d. & [Crewspace] keypad. 5. [Reactor Deck] access computer. 1. (jettison!)
