

Oxygen (y blabla) (5)

self-respect: sort :: oxygen: body
 (Aegis mining sta) (explosion) (hotbox slots, 4 crates 20 ft below)
 (stinking mine in S wing?) (opt shut pressure hatches to open; 50 workers would be isolated with Zepresset negot sprud + new team (hem pipe burst))
 [Conduit] d, S, port panel closed, blank display, power cable unplugged, outlet, screwdriver

Take screenshot. {hear chief of ops voice from fullen radio} plug cable into outlet (no go, outlet power gone)
 {power cable, screwdriver, gloves, black card, oxygen gun}

d (exit = pipe return is blocked by the panel {Tech Zanders in forward conduits; need } to check status of oxygen generators from one of the consoles; Z aka "Cptn Conards")
 x card (override card 'GAMMA') x me (Jim Zanders)
 open panel (books, boxes) x book (Aegis Station Technical Specification)
 read it (Crew: Mines ST, Techs 24, Admin 12, Card 8, Total 102)

- the override is determined by pump + screwdriver slots in fore conduit; opposite conduit controls aft override.
 S (exit) / read book -> diagram

Oxygen Thruster Overrides	Oxygen distribution
fore / aft override	40/10
delta / any	50/25
delta / gamma	25/50
gamma / delta	0/0
delta / delta	25/25
gamma / gamma	40/0
any / nil	

x cable (photo-shutter) remove shield by with screwdriver attach cable to wires. (keep!)
 Use console to re-route oxygen into the forward reservoir tanks
 (one of mines is foris to re-route oxygen to the other)

put card in left slot: gamma, aft is delta
 take card
 Small red card from brown slot? DELTA
 put red card in left slot -> DELTA + GAMMA => THETA

x leg (mine's leg book)
